Mr. Gerald W. Lauber, Chairman
and Members of the Kansas Wildlife, Parks, & Tourism Commission,
1020 S. Kansas,
Topeka, KS 66612

Regarding: Kansas Department of Wildlife, Parks, and Tourism's Proposed Changes to Coyote Hunting Seasons and Methods

Chairman Lauber and Members of the Kansas Wildlife, Parks & Tourism Commission:

On behalf of the Congressional Sportsmen's Foundation (CSF), thank you for the opportunity to comment on the Kansas Department of Wildlife, Parks, & Tourism's (KDWPT) proposed changes to the coyote hunting seasons and methods. CSF continues to support state fish and wildlife management agencies as the entity best equipped to make science-based wildlife management decisions. As such, we are pleased to voice our support for several of the provisions contained within the proposed regulations, and we appreciate the increased access and opportunities that will be provided for Kansas' sportsmen and women who serve as the primary funding source for state fish and wildlife conservation efforts.

Since 1989, CSF has maintained a singleness of purpose that has guided the organization to become one of the most respected and trusted sportsmen's organization in the political arena. CSF's mission is to work with Congress, governors, and state legislatures to protect and advance hunting, angling, recreational shooting and trapping. The unique and collective force of the Congressional Sportsmen's Caucus, the Governors Sportsmen's Caucus, and the National Assembly of Sportsmen's Caucuses, working closely with CSF, and with the support of major hunting, recreational fishing and shooting, and trapping organizations, serves as an unprecedented network of pro-sportsmen elected officials that advance the interests of America's hunters and anglers.

As noted above, CSF supports state fish and wildlife agencies as the entities best equipped to make science-based wildlife management decisions. Current research from the southeast suggests that trapping is an effective means of harvesting coyotes without long-term negative impacts on

populations¹, and targeted and sustained hunting activities, including with the use of night vision, thermal imaging, and infrared optics may further increase the efficacy of localized population management efforts. Additionally, the use of these nighttime technologies, in conjunction with the other population management techniques mentioned above, may allow KDWPT to further rely on hunters to achieve and maintain target coyote population objectives for the long-term benefit of Kansas' wildlife populations. Currently, such activities are safely and successfully employed, or are being considered, in several other states across the Midwest. Finally, we also agree with the proposed coyote season during which these methods may be used as an initial step to gauge whether their use will impact Kansas' other hunting seasons.

For these reasons, the Congressional Sportsmen's Foundation supports the proposed amendments to the Kansas coyote hunting regulations described above. Thank you once again for the opportunity to comment on these regulations. If you have questions or would like any additional information, please feel free to contact me using the information below.

Sincerely,

A handwritten signature in black ink, appearing to read "Kent Keene", written in a cursive style.
